

HISTORY: Worsening pain, no specific lesion on medial side

COMPARISON: None

TECHNIQUE: Multiplanar multisequence MRI performed without contrast administration.

FINDINGS:

Deltoid ligament grade 1 sprain with mild edema noted. No tear. Please correlate clinically.

Tibialis posterior possible mild tendinosis with mild thickening of distal segments without obvious soft tissue edema. Please correlate clinically.

Ankle joint: Talotibial and subtalar joints unremarkable. No effusion. No osteoarthritis.

Bony structures: No evidence of aggressive bony lesion. No fracture or bone marrow edema.

Soft tissue: No evidence of soft tissue mass. Normal periarticular soft tissue without edema.

Ligaments: ATFL, PTFL, CFL, spring ligament are intact.

Tendons:

Anterior compartment: Tendons unremarkable.

Lateral compartment: Tendons and ligaments are intact.

Medial compartment: Tendons and ligaments are intact.

Plantar fascia: Intact. No evidence of nodule or inflammation.

The Achilles: Intact. No tendinosis or tear.

Retrocalcaneal bursa: No fluid collection/inflammation.

Neurovascular structures: No focal lesion.

IMPRESSION:

Possible mild deltoid grade 1 sprain and possible mild tendinosis of tibialis posterior as described. Please correlate clinically.

No tendon or ligament tear.

No evidence of osteoarthritis.

No bone marrow edema.

No lesion noted in medial joint.
